

## **OPTO 22**

# **ioControl Move I/O Unit Table command with a serial B3000 and a SNAP-PAC-S1**

## **APPLIES TO**

SNAP-PAC-S1 control engine firmware

## **SYMPTOMS**

The ioControl 'Move I/O Unit to Table' command on a serial B3000 causes IVALs in debug mode to show corrupt values of 0 or 1.#QNAN.

The IVAL value is determined by the following pattern. If the XVAL for I/O point 0 is a valid positive value or -32768, then the IVAL for I/O point 15 will be 0. If the XVAL for I/O point 1 is a valid negative value, then the IVAL for I/O point 14 is 1.#QNAN. This pattern is repeated throughout the upper and lower positions on the rack.
